

Dear FCC:

We are a manufacturer of RF wireless products and have the following objections.

1. SAVI Technology proposed Part 15 changes will impact many existing products on the market. They should have picked a more appropriate frequency.
2. Their request to change the field strength is too powerful and we affect other products on the market.
3. Their request to increase the on-time transmission is too long. With 120 sec. on and 10 sec. off and then repeating can cause other products to activate.

Thank You.

Gary Leigh
